

#### ABSTRACT

Composition for topical application in the form of an oil-in-water emulsion containing an oily phase dispersed in an aqueous phase, and a hydrophilic polymer, the composition further containing (1) at least one elastomeric organopolysiloxane and (2) at least one lipophilic compound chosen from lipophilic amino acid compounds and lipophilic salicylic acid compounds. Uses thereof, including topical application to the skin, lips, hair, etc. Stabilization of certain emulsions using a lipophilic compound.
